

Recycled plastic raw material

Recycled plastic raw material from plastic packaging of lubricating oil. Homogeneous, standardized material, first blow, standard fluidity index, no smell and good resistance. Same properties as virgin raw material. Colors: blue, green, grey and black.

Recovered lubricant oil

Residual lubricant oil recovered from oil plastic packaging, that has not been used and still has the properties, making it possible to manufacture grease or new standard oil.

Licensing of recycling technology

Licensing of recycling technology, except Brazil. An innovative and efficient production system, composed of equipment and processes with a granted patent, which completely separates the oil from the ground plastic and the label, in an ecological way: without using any water, without generating waste, and with a cost reduction of 30%.
